

## News Flash

*Act Now following recent rain!*

The impact of recent rain across most of the wheatbelt has seen the value of any available dry feed compromised.

**Don't allow your stock to lose condition coming into summer.**

Offer your stock dry feed supplements **now** to avoid weight loss and prevent vitamin and mineral deficiencies.

Cattle and sheep **need to eat roughage** to maintain a healthy rumen. Using available dry feed in combination with a dry feed supplements containing urea aids in the digestion process by providing rumen microflora a desirable environment for increased activity.

Supplementing livestock with a quality mineral and vitamin block or loose lick containing urea is the most cost effective way of converting available stubbles and dry pasture into healthy and profitable livestock.

**Morgan Feed Supplies has a variety of blocks and loose licks available now for the correct supplementation of livestock over the coming summer months.**

Please contact the team at Morgan Feed Supplies if you require help determining the right supplement for your livestock/situation; our in-house nutritionist is also available to give advice and provide special formulations.

## PELLETS

**Morgan Feed Supplies also has a wide range of pellets to assist with livestock supplementation over summer.**

Compared to grain feeding, pellets are a cost-effective and safe way to feed both cattle and sheep by ensuring that the vital nutrients are evenly mixed with no wastage due to undigested whole grain.

Morgan Feed Supplies pellets are proven to finish both sheep and cattle in the feedlot with less days on feed, less deaths and result in improved meat quality.

Morgan Feed Supplies pellets are formulated under the direction of the in-house nutritionist who is a highly recognised rumen health specialist. The vitamin and mineral packages used in all Morgan Feed Supplies pellets and supplements are manufactured in Europe and are globally recognised within Optimum Vitamin Nutrition (OVN) with external QA audit and full traceability. The vitamins and minerals are fully available and are both active and stable.

#### Sheep Range:

- Prime Lamb Finisher Pellets
