

Winter Newsletter

Seasonal update

As we head into July paddocks are looking fabulous around the state. A huge contrast to what we faced this time last year.

To make the most of the great season of abundant green feed and grain in the making, it is important that producers don't forget the macro and micro mineral needs of their livestock to ensure they reach their full potential.

Target supplementation to maximise profitability.

- **Vitamin D metabolite + Biotin**

All Morgan Feed Supplies ruminant products contain a Vitamin D metabolite which has been proven through trials to more than double the absorption of calcium and phosphorus from the diet.

- **Set your stock up for summer**

Now is the time to get the most out of supplementation.

Combining energy from abundant available pasture, with quality vitamin and minerals, will ensure livestock come into summer in peak condition. Mineral and Vitamin packages used in Morgan Feed Supplies products contain vitamins that are stable and available to the animal and are globally recognised by Optimum Vitamin Nutrition (OVN).

Coming Soon

Morgan Feed Supplies will be at the following field day events:

Mingenew Midwest Expo

11th and 12th August 2021
Machinery Site 161

Dowerin GWN7 Machinery Field Days

25th and 26th August 2021
Stand 10 - Football Oval

Newdegate Machinery Field Days

1st and 2nd September 2021
Site number TBC - please check website closer to the event.

Prizes to be Won

Come and visit our stand and be in the draw to win a prize!!

Pellet Discounts

All sheep and cattle pellet orders over 10 tonnes during July, August and September

find us on facebook

New Brochure

Showcasing Lick Blocks, Loose Licks and Feedlot Supplements.

Ask for a copy in store at your local Elders, Nutrien or independent ag stockist as well as select stockfeed stores around the state.

New Products:

Production 20 Block

A high protein cattle block with 20% urea, moderate phosphorus levels and essential micro minerals.

Promotes fibre digestion of poor or dry pastures. Builds a robust animal with strong hoof and horn which is more willing to breed and travel for food and water.

Will increase weight gains in dry cows or steers and milk yield in lactating cows.

Dry Phos 10 Block

5% Phos + 10% Urea

With protein meal and urea as the source of protein and nitrogen, the additional high sulphur and magnesium inclusion will assist with live weight gains. 2:1 Ca:P ratio

CopCo 300 Block

+ Vit E and Se (Cu 3g/kg Co 0.3g/kg)

Suitable for cattle and sheep grazing pastures deficient in Copper and Cobalt.

What to feed now:

Southern Agricultural Region

20kg, 29kg, 100kg

Green Feed Block

Magnesium deficiency is common in green pasture during winter and spring and can result in conditions such as Grass Tetany. To avoid this, a high magnesium supplement should be made available to livestock grazing green pasture.

Ewe and Lamb Block

Boost production by providing ewes and lambs with adequate calcium and energy. Increase milk production and ensure ewes are in top condition for joining this summer.

Northern Pastoral Region

20kg, 29kg, 100kg

8% and 12% Phos Blocks

12% Sulphur Block

Hy-Weaner + Biotin 8% Urea

Summer Dry Feed Block 5% Urea

Summer Dry Feed Block 10% Urea

Dry Feed Block 20% Urea

Dry Feed Block 30% Urea

Equine Gold Block

Morgan Feed Supplies also produce a large range of Loose Lick supplements, Feedlot Concentrates and Pellets. Please visit our website for more details or contact our office for pricing and information.
